

Puzzle Health - App Summary

What It Is

A Flutter-based mobile app that introduces users to a health tracking experience through a two-screen onboarding flow. It visualizes a puzzle metaphor and then analyzes real health data to personalize a starting target.

Who It's For

Primary persona: a new user who wants a quick, guided setup for tracking activity (steps, distance, calories).

What It Does

- Runs a two-screen onboarding flow (Reveal then Magic Moment).
- Animates puzzle pieces with timed storytelling and haptic feedback.
- Requests HealthKit or Health Connect permissions.
- Fetches recent activity data (last 30 days) and computes a baseline.
- Generates a personalized target from the baseline.
- Shows an insight message based on the user pattern.
- Completes onboarding and navigates to the home screen.

How It Works (Repo Evidence)

- UI: Flutter screens in `lib/features/onboarding/presentation/pages` (`onboarding_reveal_page.dart`, `onboarding_magic_page.dart`).
- Animation widget: `lib/features/onboarding/presentation/widgets/animated_puzzle_pieces.dart`.
- Models: `lib/core/models/health_baseline.dart` and `lib/core/models/health_target.dart`.
- Services: `lib/core/services/health_service.dart` (data access) and `health_analyzer.dart` (baseline and target logic).
- Routing: `lib/routes/routes.dart` and `lib/routes/routes_constants.dart` wire the onboarding flow.

How To Run (Minimal)

- Install dependencies: `flutter pub get`
- Run the app: `flutter run`
- iOS only: enable HealthKit capability in `ios/Runner.xcworkspace` (Signing and Capabilities).
- Android only: ensure `compileSdkVersion >= 33` and `minSdkVersion >= 26` (`android/app/build.gradle`).
